

Juan Sebastian Arias - Full Stack developer

Bogotá, Colombia · linkedin: [Juan Sebastian Arias](#) · +57 3213727043 · infojuansedev2@gmail.com

Systems engineering and full stack developer, with experience in development, maintenance and optimization of web apps. With knowledge in PHP, JavaScript, HTML, CSS, jQuery, Bootstrap, MySQL, PostgreSQL, Git and Linux, as well as frameworks like Slim and good development practices, I also use AI tools like Copilot, GPT and more to accelerate the development of the requirements with a responsible and clear focus with the objective to deliver efficient and secure technologies solutions to generate aggregated value to the users and the organizations.

STACK TECHNOLOGIES

Tools and languages: HTML, CSS, JavaScript, jQuery, AdminLTE, PHP, Python, Composer and Apache Tika.

Frameworks: Slim, Bootstrap and Laravel.

Infrastructure: Linux, Grafana, Prometheus, Git, Docker, SonarQube and Postman.

Databases: SQL with MySQL, PostgreSQL and SQLite

Architecture: Monoliths, API REST, documentation and Clean code.

PROFESSIONAL EXPERIENCE

TISAI S.A.S
Web Developer

Bogotá, Colombia
August 2024 – August 2026

Notable Achievements

- I performed the analysis, design, implementation, and integration of a REST API to decouple modules within large applications, using the Onion Architecture as an architectural pattern to enable service growth and maintainability.
- Design and implementation of modules for comprehensive web applications for document management and IoT, such as the registration and updating of documents and their metadata for filing processes; the creation of dynamic rule modules for executing internal processes on IoT devices such as sensors; and the development of user-friendly front-end interfaces to facilitate the use of the applications.
- Proposals and development of technical solutions for new functional requirements and improvements to platforms in development and production, such as standardizing responses in JSON format instead of primitive values, implementing security validations on data inputs and files of any type in both the front-end and back-end, and optimizing large scripts by separating responsibilities across other application layers.
- I optimized communication between the front end and back end by making adjustments to the architecture and data flow to ensure maintainability and efficiency. This was applied to both legacy and modern systems and included file naming conventions, class responsibilities, server responses, and error handling..

- I implemented asynchronous processes to improve performance and the user experience in critical application modules, such as the controlled execution of external processes through logs, exception handling to provide appropriate responses to customers, and dynamic, automated manipulation of XML files for data extraction and subsequent logging.
- I participated in the deployment and rollout of new features, ensuring their proper functioning using Git, assisting with the integration of various branches from the team, managing dependencies, and monitoring production to compare expected behavior in both local and production environments.

EDUCATION

Program Yes Bogotá B1
Centro Colombo Americano

Bogotá, Colombia
October 2025 - Present

Modern PHP, Advanced SQL and Laravel
Metalcode

Bogotá, Colombia
October 2025 - Present

Corporación Universitaria Minuto De Dios - UNIMINUTO
System engineering

Bogotá, Colombia
January 2019 - April 2025

ITCertificate
Full Stack Developer Certified Specialist

Bogotá, Colombia
September 2024

LANGUAGES AND CERTIFICATIONS

Languages
Native Spanish And B1 English

Certifications

- Learn SQL from Scratch (Complete Course) - Midudev:

SQL review course starting from scratch, covering advanced topics such as subqueries, CTEs, UNIONS, views, transactions, and window functions, all accompanied by exercises for each topic.

- Full Stack Developer Certified Specialist - IT Certificate:

Certification in web development knowledge focused on concepts rather than technologies, starting with the basics of front-end and back-end design and progressing to the integration of these two areas to understand the concept of full-stack development for design, development, integration, and deployment.

- Certificate in Software Development - Mision TIC:

A certificate program offered by the Misión TIC program through MinTIC to learn web development from scratch, using tools such as Java, Python, Node, Git, and others, as well as development methodologies like Agile to work as a team on assigned projects.
